ABSTRACT OF THE DISCLOSURE

A central server having a computer readable storage media for storing
multimedia material, such as motion pictures and television programming,
in digital format is connected to a communications network such as the
Internet. Exhibitors, such as theaters and television stations, can access the
central server, preview available programming, verify the ownership of
such material, review contract provisions for obtaining and paying for the
desired programming, and download the programming along with
marketing materials for the program or movie. The central server loads
material onto the storage media as it is received from producers and
owners of such material. In addition, central server retains data regarding
requests for material, such as titles requested, who requested such, and
where the requesters are located geographically. This information can be
used to help producers market their material more economically.
